

Punched / Perforated Roller Shutter

SS07

Product Specification / Features

Product Code:	SS07
Max Width	8m
Max Height	8m
Weight per sqm	7
Lath Height/Profile	77mm
Single/Twin Skin?	Single
Material	Steel
Guide Depth	50,65,75,100
Plate Size	203-510mm
Colours Available	Full RAL
Punch/Perf Available?	Yes

Additional Information

Why Punched or Perforated Shutters?

For a cost effective roller shutter that provides security, visibility, and air flow, you don't need to look any further than a punched or perforated roller shutter.

Our punched and perforated shutters are variations of most of our steel and aluminium profiles, including some of the high security options.

This means that they are a versatile option for a broad range of premises including retail units and car parks.

If a shutter can be perforated, then it can also be punched, so depending on whether your priorities are visibility or air flow we can put something together that will meet your needs.

Our range of punched and perforated roller shutters are ideal for your shopfront, carpark, warehouse, factory, or industrial unit. They provide great security to high risk areas, and are available in a range of colours, and a variety of styles, such as:

- Galvanized Lath
- Powder coated (any colour desired).
- Flat lath

Perforated and punched finishes help to enable airflow and visibility into the premises, making them ideal for car parks or shops and other buildings with commercial applications.

Operation is available through electric motor (tubular or direct drive), or a counter balance spring for manual use. All electrically operated roller shutters can be fitted with any one of a variety of control options such as key switch, push buttons, remote control, keypad, and many more.

Speak to our experienced team for advice on which is best for your application.
