

Transparent Roller Shutter

SS08

Product Specification / Features

Product Code:	SS08
Max Width	8m
Max Height	6m
Weight per sqm	15-20
Lath Height/Profile	100 - 150mm
Single/Twin Skin?	N/A
Material	UPVC
Guide Depth	50,65,75,100
Plate Size	203-510mm
Colours Available	Full RAL
Punch/Perf Available?	No

Additional Information

Why Transparent Roller Shutters? Unmatched Durability. Expert Installation. Crystal Clear Vision.

Transparent Shutters are a great option for those who are looking to protect large apertures with a high level of security, while still preserving visibility and the openness of the space.

Transparent shutters are constructed from polycarbonate materials, so due to their lightweight construction can cover larger openings than a typical shutter.

They are also security rated to withstand ram raids from vehicles so are becoming more popular in areas that are considered to be at a higher level of threat of attack or theft.

This makes transparent shutters a front runner for those looking to protect high value or high-interest property and locations.

What Options Are Available?

All of our roller shutters are built bespoke to your precise requirements.

During a site survey, our engineers will discuss available options including colours, profiles, operation, and anything else you require.

Our shutters are built to the millimetre, and will be designed and manufactured for your exact opening.

Are Acoustic/Fire/High Security options available?

By their nature Transparent Shutters are very high security shutters.

They also meet requirements for class A fire resistance, as polycarbonate materials tend to be fire retardant as standard.

It is safe to say that transparent shutters are an excellent option for anyone who is looking for a stylish secure shutter that performs well in a variety of scenarios.
