Max Height	4m
Weight per sqm	5-10
Lath Height/Profile	N/A
Single/Twin Skin?	N/A
Material	Steel/UPVC
Guide Depth	50mm
Plate Size	N/A
Colours Available	Full RAL
Punch/Perf Available?	Enquire

Additional Information

What are Collapsible Security Grilles?

When an area needs to be secured without compromising visibility and space, or if there is no power available, a security grill can make an excellent alternative to a roller shutter.

Security grilles take up much less space, and offer more airflow and visibility than almost any roller shutter.

Due to their relatively simple construction they are also inexpensive and very easy to install, so if budget constraints are an issue then these grilles become a fantastic choice.

We also offer fixed grilles for a more permanent solution, these work well over windows that are particularly vulnerable to trespassers and would-be intruders.

Security Grilles are suitable for any application where space, budget, and power are at a premium, they are also very compact and can be folded away to make sure there is no impact on the overall opening size.

Most often we install security grilles in the following locations:

- Homes
- Offices
- Retail Window Displays
- Car Showrooms
- Museums
- Train Stations
- Server Rooms

Our security grilles are the first choice for window and door security in any home, office, or retail premises, especially where head room is limited. Top hung and constructed from steel are not only easy to use and reliable, but provide peace of mind. Single sash and bi-folding gates are both available and extras can include folding, removable, or hinge aside bottom tracks.

They are supplied and manufactured in any colour you require and are key operated.

Designed to keep intruders out while letting maximum light in, they are perfect for patio doors and French windows and any other vulnerable ground floor doors or windows.

Each collapsible gate is supplied in a powder coat finish to white as standard but other colours are available upon request, with a choice of 'X' or 'S' lattice.
