Additional Information

What Are Sectional Overhead Doors?

Robust Security & Insulation. Expert Installation. Ongoing Support.

Shutters are not only a great idea for security and protection, but also as a way to insulate against weather, wind, and noise. Insulated shutters make use of the cavity that is created in the design of twin-skin shutters.

By filling this cavity with insulated foam and other material the barrier that roller shutters create can offer more than security. They are available in a range of profiles and materials.

It is possible for lightweight aluminium insulated shutters to be used in home applications, or for heavy duty steel insulated shutters to provide LPS1175 approved security solutions.

They can also be certified for acoustic performance and fire resistance. For this reason insulated shutters are one of the most versatile types of shutter on the market.

What are Sectional Overhead Doors Used For?

Although these work in a similar way to a traditional up and over garage door, they are a much more robust industrial solution to a similar (but different) range of problems than a typical roller shutter.

We recommend Sectional Overhead Doors for any of the following applications:

- Showrooms
- Loading Bays
- Warehouses
- Factories
- Commercial Premises
- Supermarkets

If you have a requirement that you don't see listed above, that doesn't mean we can't help. Get in touch with our friendly sales team to discuss your requirements.
