

# Window Shutters

SS12

## Product Specification / Features

Product Code:	SS12
Max Width	5m
Max Height	5m
Weight per sqm	7.5
Lath Height/Profile	36, 55, 77mm
Single/Twin Skin?	Twin
Material	Aluminium
Guide Depth	25,45,53.60,65
Plate Size	150-300mm
Colours Available	Full RAL
Punch/Perf Available?	Yes

## Additional Information

### What Are Window Roller Shutters?

Window Roller Shutters are aluminium low profile roller shutters designed for use with windows. They are not to be confused with wooden window shutters, that are old fashioned hinged doors that are closed over the exterior face of a window.

Window Roller Shutters are designed to secure a premises that may be susceptible to intrusion, while also offering insulation, ventilation, or black-out properties if necessary. They are almost always made using aluminium profiles, but if necessary steel shutters can be used to.

We often hear from home and business owners who simply want a shutter that can block out the sun during a certain time of day, whether it is to stop the sun shining through east-facing windows, or to stop an office heating up during the afternoon hours, an aluminium shutter is a great and inexpensive choice.

### What Options Are Available?

Window Shutters are built bespoke to your exact requirements.

During a site survey, our engineers will discuss available options including colours, profiles, operation, and anything else you require.

You can choose from a wide range of finishes including RAL and BS colours, and in some cases, wooden-effect laminate finishes.

### Are Acoustic/Fire/High Security options available?

Window Shutters are often needed to block out noise, so acoustic rating is possible although usually quite expensive. They are able to be upgraded to LPS1175 SR1 and SR2 security levels in some cases, although this does depend on the configuration of the shutter and it's location in the house.

Operation is available through electric tubular motor, or a counter balance spring for manual use. All electrically operated roller shutters can be fitted with any one of a variety of control options such as key switch, push buttons, remote control, keypad, and many more.
