

Warehouse Roller Shutter

SS15

Product Specification / Features

Product Code:	SS15
Max Width	15000mm
Max Height	15000mm
Weight per sqm	10
Lath Height/Profile	77mm
Single/Twin Skin?	Single
Material	Steel
Guide Depth	50,65,75,100
Plate Size	203 - 510mm
Colours Available	Full RAL
Punch/Perf Available?	Yes
Fire Rating?	Yes

What Are Warehouse Shutters?

Warehouse Rollers are designed for use in warehouses and factories where any number of requirements may need to be met. As well as security, these shutters are often required to operate many times per day and meet fire or security regulations, all while opening as quickly as possible to let staff, and loading vehicles pass through. For this reason our warehouse roller shutters are incredibly versatile products.

They are almost always constructed from steel, however it is also not unusual to find PVC curtain solutions where security is not as much of an issue.

All of these factors can make warehouse roller shutters ver resource intensive.

They are often large shutters that require 3 phase direct drive motors to operate efficiently.

With these types of motors and functions, solutions can quickly become expensive so it is important to make sure the specification is as effective as possible.

What Options Are Available?

All of our roller shutters are built bespoke to your precise requirements. During a site survey, our engineers will discuss available options including colours, profiles, operation, and anything else you require.

Our shutters are built to the millimetre, and will be designed and manufactured for your exact opening.

As with the rest of our shutters, there are many 100's of colour options to choose from the RAL and BS colour ranges.

Are Acoustic/Fire/High Security options available?

Warehouse Shutters can be made into any of the above, although certain combinations are not possible.

For example it is not possible for a shutter to be fire certified and security rated at the same time. This is due to conflicting requirements in each of the certifications that make it impossible to satisfy both.

That being said, our industrial shutters often reach LPS1175 SR3 and SR4 security levels, up to 27dB reduction, or 4 hours of fire resistance
